The Cross-Correspondences

In parapsychology, the term ‘cross-correspondences’ describes a phenomenon that emerged in the early twentieth century in the study of 'automatic writing', a practice in which a person writing in a state of semi-trance may obtain scripts apparently originating in the unconscious mind, but seemingly also on occasion from an external source. Investigators of the Society for Psychical Research noticed that statements in a script produced by one person sometimes seemed connected with similar statements in scripts produced by one or more persons elsewhere, at about the same time, without any communication having occurred among these people. They concluded that such 'correspondences' were being deliberately created by certain recently-deceased colleagues to convince them of their having survived death, and in such a way as to exclude other possible explanations.

By 1936, over 3000 scripts were available for assessment. The phenomenon was closely analysed by senior SPR figures, and for decades was considered by many in the psychical research community to have provided convincing proof of survival of death. This is less the case today, as the extreme complexity of some of the claimed correspondences, and the obscurity of the literary references on which they are often based, make them hard to evaluate with any certainty. Some continue to find them convincing, while others argue their persuasiveness has been overstated.

This introductory article outlines the background and basic principles. Sources for more detailed reading are given below.

Background

Frederic Myers, a co-founder of the Society for Psychical Research, died on January 17, 1901. On March 5, Myers's colleague, neighbour and close friend Margaret Verrall, a classics lecturer at Cambridge University, began to experiment with automatic writing. A principal aim was to offer Myers, in the event (however unlikely) that he had survived the death of his body, the possibility of communicating with the living. Eventually messages signed by 'Myers' started to appear in her scripts, some written in Greek or Latin.

Two years later, Verrall’s daughter Helen followed her in taking up automatic writing, in which similar messages by 'Myers' sometimes appeared. Independently, Alice Fleming (sister of Rudyard Kipling), then living in India, also took up the activity: in an early script ‘Myers’ urged her to get in touch with Verrall in Cambridge, giving Verrall’s address there. Another significant automatist of this period was a sister-in-law of Myers, Winifred Coombe-Tennant, a woman of wide social and cultural interests whose mediumistic gifts were intensively studied by SPR researchers and who began automatic writing in 1908 (she is referred to in the literature as 'Mrs Willett'). These women were highly educated and able to take an objectively critical view of the material they produced.

Further contributions were made by Leonora Piper, a professional medium who was being investigated by SPR researchers, and whose automatic writing likewise contained statements by 'Myers' at the same time as these started appearing in scripts by other automatists. Neither Fleming, Willett nor Piper possessed significant knowledge of Greek or Latin, which argued against them having influenced the contents of the scripts.

In an initial report on the scripts published in the SPR Proceedings in 1906, Margaret Verrall was dismissive of much of the material she and her daughter had produced. They appeared to include examples of telepathy and clairvoyance, but many were disjointed and garbled in phrasing. She was puzzled about the frequent references to literature and history.

However in April that year, SPR research officer Alice Johnson came to an astounding conclusion: that when certain fragments produced by different automatists were connected, a pattern emerged, as if they were pieces of a jigsaw. Such a thing, Johnson argued, could only be achieved under the direction of a single mind, at least in the absence of any deliberate collusion between the automatists, some of whom, for some of the time, lived in different continents. If that mind was the surviving Myers, as appeared to be the case, it would have been a deliberate ploy in his part to overcome the common objection that messages passed through mediums, ostensibly from discarnates, actually originated in the minds of living people, that is, by ESP (what is often referred today as 'super-psi' or 'living agent' psi).
This was confirmed by 'Myers' and other putative authors of the scripts: they asserted that a single theme distributed between various automatists, none of whom knew what the others were writing, would prove that a single independent mind, or group of minds, was behind the whole phenomenon. The purpose of including obscure allusions to ancient Greek and Roman literature was to establish the identity of Myers and two others of his deceased colleagues, who, like him, were classical scholars with a deep knowledge of the subject: Henry Sidgwick and Edmund Gurney, co-founders with Myers of the SPR. They were later joined as communicators by Henry Butcher, professor of Greek at Edinburgh University, and AW Verrall, a fellow in classics at Trinity College Cambridge, and husband of Margaret Verrall.

Some of the cross-correspondences and literary puzzles in the scripts seem impressive, as are certain instances of apparent telepathy and clairvoyance. Also evident in the reports is a determination on the part of the investigators to rule out all normal avenues for acquiring apparently paranormal information, including cryptomnesia (unconscious memory) and knowledge of each other's scripts at the time of writing.[3] Efforts were made to keep the automatists in ignorance of each other's output.[4]

**Some Examples**

**Yellow**

An example of a simple linkage is the following. On August 6, 1906, Alice Fleming at her home in India wrote these words in an automatic script:

    yelo...yellow ivory

Two days later, on August 8, Margaret Verrall, writing in her home in Cambridge, wrote these words:

    I have done it to night y yellow is the written word...Say only yellow

Such correspondences can be distinguished from ordinary coincidences by virtue of the fact that they occur almost contemporaneously and are signalled, or commented on in some way, by the communicating intelligence.[5]

**Thanatos**

This early, more intricate cross-correspondence is based on a simple theme connecting three people in different parts of the world. It was found by John Piddington, honorary secretary of the Society for Psychical Research, who took a special interest in the phenomenon and devoted the following decades to its study.[6]

Margaret Verrall (in Britain), in an automatic script on April 29, wrote:

    Warmed both hands before the fire of life. It fades and I am ready to depart.

She also drew the Greek letter δ (delta).

She then wrote in Latin the words 'Give lilies with full hands'; the words in English 'Come away, Come away'; and, again in Latin, the words 'pale death'.

Finally, she wrote:

    You have got the word plainly written all along in your own writing. Look back.

The last statement, apparently an instruction, encouraged Piddington to look elsewhere for possible connections. In transcripts of sittings with the medium Leonora Piper (in Boston), he found she had been heard to utter the word 'thanatos' as she was coming out of trance, at the conclusion of four sittings between 17 April and 7 May. She did not know what it meant, but said she had felt an urge to say the word.

Piddington also found that Alice Fleming (in India), in an automatic script on April 16, had written:

    Maurice Morris Mors. And with that the shadow of death fell on his limbs.

To Piddington, the intent was clear. The word 'thanatos' is ancient Greek for death (Piper knew no Greek), signalling a theme that at the time was being amply covered in other people's scripts. Fleming referenced an English poem about death; Maurice was a young soldier friend of hers who had died in battle; mors is Latin for death (Fleming knew no Latin).
Verrall had referenced a poem by Walter Savage Landor on the subject of death; a Shakespeare quotation on death; a passage in Virgil’s Aeneid where Anchises foretells the early death of Marcellus (‘give lilies with full hands’); and a reference to Horace’s Odes where ‘pale death’ is said come equally to paupers and kings.

In short, it appeared as though a single intelligence had, in a time-frame of about three weeks, distributed elements of a single striking theme in a way calculated to come to the attention of investigators.

**Hope, Star and Browning (1906-7)**

This more complex example was initiated by John Piddington with the medium Leonora Piper, who was invited to England in 1906 to see if she could contribute to the cross-correspondence phenomena. Piddington hit on the idea of asking the communicating intelligence who claimed to be Frederic Myers to give a different message to two automatists and then give a message to a third person that would reveal a hidden connection between the first two.

The attempt was initiated in a sitting in December 1906. When Piper had become entranced, Piddington engaged in conversation with her control Rector (an ostensible discarnate personality acting as a go-between), reading a message written in Latin (which would be meaningless to Piper herself) with the request that it be passed to ‘Myers’. Piddington further asked that Myers relay its contents to Margaret Verrall and that he attach some code words or symbols in order to confirm that the message came from him.

In later sessions Rector informed Piddington that the message had been passed on to Myers, also that Myers was being helped in the task by Richard Hodgson, a SPR researcher who had died the year before.

In a session on January 16, Rector passed on a brief statement from Myers, to the effect that he thought he could do what Piddington asked. Referring to his previous suggestion, Piddington now specified the symbols that he wished Myers to append to his message to Verrall to indicate a cross-correspondence was being tried for: a circle containing a triangle.

In a script by Margaret Verrall on January 23 appeared the following:

> Justice holds the scales. That gives the words but an anagram would be better. Tell him that – rats, star, tars and so on. Try this. It has been tried before. RTATS. Rearrange these five letters or again t-e-a-r-s... s-t-a-r-e.

(Anagrams had been a particular interest of Hodgson and Myers.)

Again on January 28, Margaret Verrall wrote:

> Aster [Latin for star] Teras [Greek] for sign and also an anagram for star... And all a wonder and a wild desire... the hope that leaves the earth for the sky – Abt Vogler...

This was accompanied by a drawing of a triangle in a circle.

Piper, in a session on February 11, said (in trance):

> I referred to Hope and Browning... I also said Star... look out for Hope, Star and Browning

In a script by Margaret Verrall on February 17 appeared a drawing of a star, and the words:

> That was the sign she will understand when she sees it... No arts avail... rats everywhere in Hamelin town

The *Pied Piper of Hamelin* is a poem by Browning telling the medieval legend of the mysterious rat-catcher who lured the city's rats away by playing his pipe.

In a Piper session on March 13:

> It suggested a poem to my mind, hence BHS [Browning Hope Star]

In a Piper session on March 20, Myers was reminded that he had promised to say which particular Browning poem he meant. Eventually, on April 24, the poem Abt Vogler was indicated. Asked why, he said: ‘I chose that because of the appropriate conditions mentioned in it which applied to my own life’.

Piddington considered this episode to have successfully fulfilled the criteria he outlined at the beginning. Myers had picked up his initial suggestion, giving messages to Margaret Verrall and Helen Verrall, and eventually delivering to a third
person, Piper, a final message that, by naming Abt Vogler, broadly confirmed Browning as the unifying theme. Furthermore, the messages were accompanied by frequent allusions by the communicating intelligence to the task that was being attempted, indicating that the coincidences were not purely random.

Meanwhile, references to anagrams of ‘rats/star’ and similar words continued to appear. Piddington later discovered scribbled practice attempts at anagrams of these words among the deceased Hodgson’s personal papers.

**Ear of Dionysius (1918)**

This complex literary puzzle emerged in automatic scripts written by the medium ‘Mrs Willett’ (Winifred Coombe-Tennant). It began with a statement addressed to Margaret Verrall, purporting to come from her deceased husband AW Verrall: 'Do you remember you did not know and I complained of your classical ignorance'.

There followed references to acoustics, a whispering gallery, slaves, tyrant, ‘one-earred place’, Field of Enna, and Syracuse. These are all allusions to the Ear of Dionysius, a rock grotto at Syracuse shaped roughly like a donkey’s ear, that had been made by Dionysius when he was the tyrant ruler of that city. The grotto acted as a whispering gallery, amplifying sounds, and was used by Dionysius to overhear the conversations of prisoners confined there. Margaret Verrall then recalled having once asked her husband about the grotto, and being laughingly rebuked for her ignorance.

The communicators, who identified themselves as AW Verrall and his deceased colleague Henry Butcher, also a classical scholar, then offered a number of other obscure allusions as a puzzle for investigators to unravel. These centred on the story of the one-eyed monster Polyphemus described in Homer's Odyssey, whose love for Galatea is rejected, and who, in a jealous rage, crushes her lover Acis to death with a rock. Another strong theme is Sicily, the setting for the story.

Other elements in the scripts included mention of 'Cyclopean Phylox', who once laboured in the stone quarries by the grotto and wrote a satire on Jealousy. This clue eventually led the investigators to a poem in an obscure scholarly book titled Greek Melic Poets, which AW Verrall had used as a text for his lectures. The various allusions in the scripts were all found to combine here and nowhere else, and it seemed that only classical scholars of the calibre of Verrall and Butcher would have been able to identify the source. The investigators were also impressed by the highly recognizable characteristics of the communicators, and became convinced they were in touch with Verrall’s and Butcher’s surviving minds.

**Assessments and Debates**

The cross-correspondences were the subject of numerous and lengthy research reports in SPR publications, by Margaret Verrall, Alice Johnson, John Piddington, and others. These generated considerable debate within the SPR (see below for full list with abstracts).

The prevailing view of SPR investigators can be summarized in a 1917 assessment by Eleanor Sidgwick:

> We have to seek the designer. It cannot be the supraliminal (i.e. conscious) intelligence of either automatist, since ex-hypothesis, neither of them is aware of the design until it is completed. Nor, for a similar reason, can it be attributed to some other living person since, so far as can be ascertained, no other living person had any knowledge of what was going on. It is extremely difficult to suppose that the design is an elaborate plot of the subliminal (i.e. subconscious) intelligence of either or both automatists acting independently and without any knowledge on the part of the supraliminal consciousness; and the only remaining hypothesis seems to be that the designer is an external intelligence, not in the body...

> I must admit that the general effect of the evidence on my own mind is that there is co-operation with us by friends and former fellow-workers no longer in the body.\(^9\)

This view has continued to be held by more recent commentators writing about survival. In a 1959 study, Hornell Hart concludes:

> Only with extreme difficulty can the cross-correspondences be explained away as having resulted from the fabrications of physically embodied minds... [They] provide persuasive evidence, not only of the survival of the personalities represented, but of their continuing alert intelligence, and of their persistent purposiveness in demonstrating their continued existence in ways not explicable by even super-ESP.\(^{10}\)

**Criticism**
Robust criticisms have also been made. In the early years, Spiritualists convinced of survival found it elitist and over-complex, and inferior to the best evidence provided by certain mental and physical mediums.\[11\]

However, most of the criticism comes from an anti-survival perspective. Some commentators maintain that despite the complex and apparently purposive character of the cross-correspondences, the possibility that they came about through telepathy and clairvoyance from the living is not conclusively ruled out.\[12\] [13] A particular objection is the prominent part played by Margaret Verrall, who as a classics scholar possessed the detailed knowledge that might have enabled her, subconsciously, to concoct the puzzles in her own scripts, and to telepathically communicate with other mediums and automatists during their own productions. A yet more elaborate theory is that the puzzles were concocted, again subconsciously, by Myers, AW Verrall, Butcher and the others during their own lifetimes, and ‘planted’ in the minds of the automatists. Such theories draw on what later came to be referred to as the ‘super-psi hypothesis’, where apparent evidence of spirit survival is actually caused by the unconscious, virtually unbounded operation of psi.

Critics have also argued that chance may have played a large role in creating illusory cross-correspondences.\[14\] Spurious ‘cross-correspondences’, it is suggested, may be plausibly found in any large body of literary material.

Another view, put forward by Trevor Hamilton (2017), is that the investigators were too close to their subject matter to form an objective assessment. They had been friends and colleagues of Myers, mostly sharing his academic Cambridge background and attitudes, and a legitimate suspicion is that, while there was much ostensibly paranormal material in the scripts, their conclusions were partly the product of wish-fulfilment and group think.\[15\]

Hamilton also discusses the affair between Winifred Coombe-Tennant, one of the main automatists and Gerald Balfour, a major interpreter of the later scripts, and the impact this might have had on an objective assessment of the material.

**Survivalist Counter-Arguments**

Counter-arguments have been put forward by defenders of the survivalist view. The possibility of a spurious effect created by chance correspondences was acknowledged at an early stage by SPR investigators. However, when they carried out experimental research they found no evidence to support this idea.\[16\] The claim has also been examined in depth and rejected by more recent researchers.\[17\]

The ‘super-psi’ explanation of the cross-correspondences has been vigorously challenged, notably by Chris Carter, who, along with other useful material, provides a detailed and clear summary of the Lethe Case, sometimes held up as the cross-correspondence gold standard.\[18\]

With regard to any unconscious psi contribution by Margaret Verrall, Archie Roy points out that, had she indeed been indirectly responsible, her death might have been expected to bring the phenomenon to an end, when in fact it continued as strongly as before, and for a number of years.

Roy adds two further points:

**Firstly,** a number of the various cross-correspondence cases involve a two-way process, the investigators’ efforts at decipherment invoking a contemporary reaction on the part of the Script Intelligence when it sees it has to make things easier for the investigators to produce a solution...

**Secondly,** the nature of [super-psi] objections, increasingly elaborate – some would say hopelessly byzantine in their ingenuity – and invoking the operation of some faculty involving telepathy, clairvoyance and precognition on a massive scale in order to avoid the simple hypothesis that the communicators were who they said they were, shows the power of the Cross-Correspondences in displaying the paranormal in action.\[19\]

**Literature**

**Article Abstracts**

This is a selection of articles on the cross-correspondences published by the Society for Psychical Research. A complete list can be found in the SPR website. The articles can be accessed in full at the SPR’s library or the online library Lexsci - visit the SPR website for details.

Verrall, Mrs. SOME RECENT EXPERIMENTS IN AUTOMATIC WRITING, *Journal* 10, 1902, pp. 291-5. The author describes how over a period of many years she succeeded in obtaining by automatic writing sentences in Latin, Greek and English, of which the greater part consisted of ‘adjurations to persevere, reproaches to the writer for stupidity in interpretation, and exhortations to patience [with no] general ethical discourses nor any attempt at theological discussion]. (Summary of reading and discussion). automatic writing/cross correspondences/survival

Verrall, Mrs. A FURTHER ACCOUNT OF EXPERIMENTS IN AUTOMATIC WRITING, *Journal* 11, 1903, pp. 71-4. Describes the genesis of the cross correspondences in which Verrall’s husband, without her knowledge, attempted to transmit to her telepathically a Greek phrase carrying the idea One-horse Dawn’, and other incidents. Summary of reading followed by short discussion. automatic writing/cross correspondences/survival

Verrall, Mrs A.W. (Margaret). ON A SERIES OF AUTOMATIC WRITINGS, *Proceedings* 20, 1906, pp. 1-432. This full account by a Cambridge classics teacher of her experiences in obtaining automatic writing is in introduction to the cross-correspondences. In the first of two sections Verrall describes the script’s general characteristics: many passages in Latin and Greek, but not French or other languages she knew; allusions, quotations, puns and verse; conversations, dialogues, signatures; the imitation of the handwriting of deceased acquaintances, including Frederic Myers and Henry Sidgwick; the tendency of the script to exhort, persuade, give instructions and to refer to personal matters; references to unverifiable people and events, etc. The second section deals with topics broached by the script that relate to verifiable material: reference to incidents in the writer’s life; to acquaintances including SPR researchers known to be interested in the
phenomena; to past and future events, etc. An apparently successful attempt by her husband to transmit ideas telepathically to the scripts is described in the One-Horse Dawn’ episode (156) (see also NOTE, Proceedings 25, 1911, pp. 109-12). Cross-correspondences with the lives and work of other mediums, including Thompson and Piper and Forbes, are described, also the outcome of a collaboration with another automatic writer, Mrs Forbes, which produced much seemingly evidential material. Extracts are given in an appendix and there is a detailed contents-synopsis at the front. See also ABSTRACT & DISCUSSION, Journal 11, 1904, pp. 296-8. automatic writing/cross correspondences/survival

Piddington, J.G. & Lodge, Oliver. FRESH LIGHT ON THE ONE-HORSE DAWN' EXPERIMENT, Proceedings 30, 1920, pp. 175-305. References to an old man in white in the Verrall’s original experiment are thought by Piddington to relate to allusions to Oedipus which occur among much automatic material discarded by Mrs Verrall as meaningless. Responding to the obvious obscurity in Piddington’s paper, Oliver Lodge (291-5) suggests that its intention is to show that the deceased Myers was taking advantage of Prof. Verrall’s experiment with his (Verrall’s) wife in order to develop the process that later became known as the cross-correspondences. In his reply (296-305) Piddington offers qualified confirmation (300) and more details. automatic writing/cross correspondences/survival

Johnson, Alice. A SERIES OF AUTOMATIC WRITINGS, Journal 15, 1907-8, pp. 98-102. A discussion of apparent links between automatic scripts produced independently by Mrs Holland and Mrs Verrall. This early conversation about what would become one of the Society’s chief activities reviews the phenomenon in terms of its importance as survival evidence. automatic writing/cross correspondences/survival

Johnson, Alice. ON THE AUTOMATIC WRITING OF MRS HOLLAND, Proceedings 21, 1908-9, pp. 166-391. One of the earliest papers on cross-correspondences. This introduces ‘Mrs Holland’, the pseudonym of Mrs Fleming, a sister of Rudyard Kipling living in India, and who practised automatic writing and formed a productive association with SPR researchers. It describes the appearance in her scripts, following her reading of Frederic Myers’s Human Personality, of messages automatically from the deceased Myers and addressed to Mrs Verrall in Cambridge, and the subsequent development of this and other controls, including Edmund Gurney, apparently attempting to demonstrate their survival. Seven chapters cover different aspects of the experiment: Mrs Holland’s early experiences; the Verrall messages; development of Myers and Gurney controls; comparisons between scripts by Mrs Holland and Mrs Verrall appearing to show cross-correspondences; literary allusions; aspects of the trance; Mrs Holland interviewed by the author; the Hodgson control; theories and assessments. See also Proceedings 24, 1910, pp. 2-10. Answers various criticisms. automatic writing/cross correspondences/survival

Piddington, J.G. A SERIES OF CONCORDANT AUTOMATISMS, Proceedings 22, 1908, pp. 19-416. Book-length report and analysis of experiments conducted during sittings given by Mrs Piper during a visit to England in 1906-7. The sittings were used by SPR investigators to develop certain of her trance controls, especially those claiming the identity of deceased researchers - Myers and Hodgson. The experiments took the form of cross-correspondences, 18 of which were suggested by the investigators and over 100 by the trance personalities, most of them by Myers and Hodgson. Note: the subscript letter is used by the authors of papers to identify the medium through whom the personality is communicating, ie, Myersp=Myers speaking through Leonora Piper; Hodgsonv = Hodgson in automatic scripts by Mrs Verrall, etc. 1.'ST PAUL’, pp. 31-5. Experiment arranged with the Hodgson control, with a possible correspondence subsequently appearing in scripts by Mrs Holland and Helen Verrall, Margaret Verrall’s daughter, later Mrs Salter. See also Journal 18, 1917-18, pp. 71-83, 98-9, 112-21, 140-44. 2.'FRANCIS AND IGNATIUS’, pp. 35-6. Minor coincidence involving Myers control, regarded as probably accidental. 3.'TRIANGLE WITHIN A CIRCLE’, pp. 36-8. It is suggested to the Myers control that he produce a simple drawing in a script by Mrs Verrall, and one closely corresponding to the suggestion subsequently appears. 4.'STEEPLE’, pp. 38-46. References centering on the word ‘steeple’ apparently motivated by the Prudensp communicator and involving another medium, Mrs Thompson, appear in scripts by Mrs Holland and Mrs Verrall. 5.'LIBRARY, MY OWN NAME, AND MRS SIDGWICK’S’, pp. 46-59. Myer shows awareness of reference made earlier by Myersyto Mrs Sidgwick. This episode is treated by E. Sidgwick at greater length in a separate paper, AN INCIDENT IN MRS PIPER’S TRANCE, pp. 417-40, below. 6.'HOPE, STAR AND BROWNING’, pp. 59-77. Regarded as one of the most successful of the early cross-correspondences and one that has been frequently referred to by commentators. Involves anagrams and a complex association of ideas around a Browning poem ‘Abt Vogler’. The episode is further discussed in the report of the Latin Message, at the end of this paper. 7.'ARROW’, pp. 77-86. The drawing of an arrow appears in a script by Mrs Verrall. The following day during a Piper sitting the Hodgson control says he has given ‘arrow’ to Mrs Verrall and a few days later an arrow also appears in a script by her daughter Helen. 8. GIANT AND DWARF, pp. 87-94. An investigator during a Piper sitting proposes ‘Giant and Dwarf as a theme to impress on the automatists. The Piper communicators subsequently refer frequently to their attempts to get Mrs Verrall to write it, but nothing appears in her scripts. However, some references are seen as indirect effects of this experiment. 9. LAUREL WREATH, pp. 94-103. References to ‘Laurel wreath’ in Piper sittings are compared to a passage in a script by Mrs Verrall in which this theme is explored. 10. ‘CELESTIAL HALYCON
DAYS’, pp. 103-7. Slight correspondences to themes suggested by the Myersp control are found in Mrs Verrall’s script. 11. ‘CROSSING THE BAR’, pp.107-72. A phrase by Plotinus that also recalls themes by the poet Tennyson is chosen by Mrs Verrall as the basis of an experiment involving the Myers communicator. A series of communications by Myers suggest complex parallels between the two writers that Mrs Verrall had not been aware of. See also Proceedings 26, 1912-13, pp. 245-50. 12. ‘VIOLETS’, pp. 172-8. The word ‘violets’ uttered by the Hodgsonp communicator and apparently intended as the subject of a cross-correspondence experiment is found to occur more than once in a script begun by Mrs Verrall two hours earlier. 13. ‘CUP’, pp. 179-92. ‘Cup’ is mentioned by the Hodgson communicator, apparently as the subject of an experiment, and the word, in one case accompanied by a drawing, appears in the following day in the scripts of both Mrs Holland and Mrs Verrall. See also NOTE, Proceedings 25, 1911, pp. 304-19. 14. ‘DIANA’, pp.193-208. A mention of ‘Diana’ as the subject of an experiment follows a passage about the Greek goddess in a script by Mrs Verrall three weeks earlier. Other possible allusions follow in a later script. 15. ‘HEAVEN LIES ABOUT US IN OUR INFANCY’ AND ‘FAITH, HOPE AND CHARITY’, pp. 209-10. Brief extract from Piper sittings relating to earlier reports by Mrs Verrall in Proceedings 20, pp. 73, 297. 16. ‘EURIPIDES’, pp. 210-20. The word ‘Euclid’ mentioned by the Myers communicator corresponds with allusions to the Greek playwright in the scripts of both Mrs Verrall and Mrs Holland during the same period. 17. ‘SPIRIT AND ANGEL’, pp. 220-30. A phrase that the Myers communicator claims to be trying to give to Mrs Verrall appears to relate to classical allusions in the scripts of Mrs Verrall and Mrs Holland. 18. ‘O’ER MOUNTAINS, SEAS AND RIVERS’, pp. 230-41. Correspondences on the theme of Wordsworth’s poem ‘Daffodils’. 19. ‘LIGHTS IN THE WEST’, pp. 241-81. Complex correspondences arising out of episodes 16-18 with diagrams and chronology. 20. ‘AZURE’ AND ‘HORIZON’, pp. 281-93. More cross-correspondences, some straightforward and some complex. 21. ‘THANATOS’, pp. 295-304. Cross-correspondences around the idea of death. 22. ‘LAUS DEO’, pp. 304-7. A Latin phrase written by Mrs Verrall emerges during a Piper sitting some months later, but this coincidence is regarded as an insignificant. 23. ‘MUSIC’, pp. 307-11. A cross-correspondence relating to the Latin Message, described in the following section. THE LATIN MESSAGE, pp. 312-416. A lengthy description of the investigators’ attempt to introduce a more complex - and potentially more evidential - method into the experiments. Rather than merely finding visible relationships between allusions in the various scripts, the investigators conceived the idea of apparently unrelated ideas in the scripts of two mediums being shown to be connected by means of a communication through a third, giving more obvious indication of an intelligence beyond the minds of the living. The suggestion was made to the Piper communicators by means of a short message set in difficult Latin, which Myers and Hodgson would understand but Piper would not. The analysis describes the investigator’s attempt to get convincing recognition from Myers that he has understood the message. This appears to come when Myers points to the Hope, Star and Browning case (6, here above) as at least partly fulfilling the conditions set in the message. automatic writing/cross correspondences/survival
